

Septimiu COSTEA

CEO – Nova Power & Gas

Septimiu Costea is the Chief Executive Officer of Nova Power & Gas, part of the E-INFRA Group. With almost 20 years of experience in the energy sector, he has built a strong career that combines technical expertise with strategic leadership in power generation, networks, and infrastructure development.

He joined E-INFRA in 2008 after graduating from the Technical University of Cluj Napoca, Faculty of Energy Management and System Technology, starting as an Electrical Engineer at Electrogrup. Over the years, he advanced through roles of increasing responsibility, managing the design, construction, and commissioning of complex electrical infrastructure projects, including transmission networks, power plants, and related installations. His work has directly supported the modernization of Romania's energy infrastructure and contributed to the integration of European standards in power systems development.

In 2022, Septimiu transitioned to Nova Power & Gas as Technical Director, where he oversaw major investment projects in renewable energy, gas-fired power plants, and natural gas networks. He also played a pivotal role in developing cross-border trading capabilities, enabling the company to participate in European wholesale markets and strengthen regional energy security.

Since April 2024, Septimiu has served as Deputy CEO, and later as CEO of Nova Power & Gas. In this role, he is responsible for guiding the company's strategy across both technical and investment divisions, driving innovation, sustainability, and energy transition initiatives. Through his leadership, Septimiu has helped position Nova Power & Gas not only as a leading Romanian energy player but also as a contributor to regional energy transformation.
